

Word Macro Security in Microsoft Word 2007

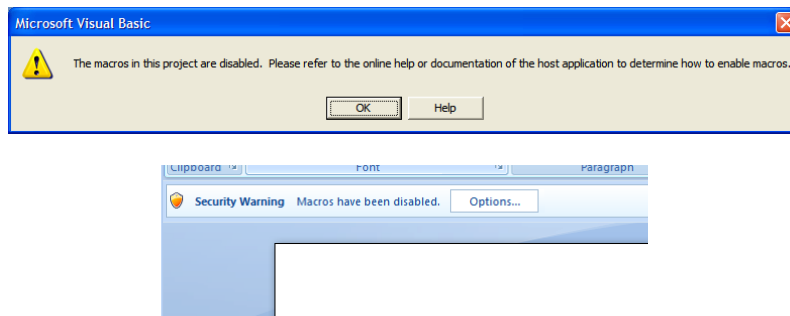

Last Updated: 1/12/2010

Symptoms

FastCode uses Macros in Microsoft Word.

When FastCode is run in a new installation, the default settings of Microsoft Word 2007 will prevent it from running.

Messages similar to the following will be displayed:

You can click on “options” and “enable this content” to allow FastCode to run. But this will only allow it to run during this session.

Solution

To permanently allow FastCode to run follows these steps:

1. Click on the “Office” Button (top right)  , and then click on **Word Options**.
2. Click on **Trust Center**, and then **Trust Center Settings...**
3. Click on **Trusted Locations**, and then **Add New Location...**
4. Browse to the installed location of FastCode (most likely C:\Program Files\FastCode).
5. Click OK several times to save the settings.
